

Team G. Iteration 3 Feedback

Total mark: 79

Requirements: 15 / 20

Not much changed since iteration 0

High-level design: 24 / 30

Not much change from iteration 2.

Implementation: 16 / 20

The implementation server side implementation is very neatly done. It seemed, though, that authentication was missing.

One thing bugged me: Lines like `dataToReturn[0] = results.getString(1);`. It would be better to use the version of `getString` that uses a column label. Also why return an array; an object is more appropriate. Something like `dataToReturn.userName = results.getString("userName");` would be better.

Feature Completeness: 16 / 20

Some way to go.

Presentation: 8 / 10

Other comments

Is there any checking of permissions. For example, it seems that if I have the `fileId`, I can read anyone's file.

Logs should be kept up to date and include the work done, not just the time spent. Only 3 logs for a team of 5!
